Height: 10 feet

Spread: 8 feet

Sunlight: ○

Hardiness Zone: 6b

Group/Class: Climbing Rose

**Description:**

This vigorous rose is a hardy, reaching, large flowered climbing or shrub rose producing showy clusters of urn shaped to cupped double yellow flowers, suffused with orange, pink, red and coral as the flowers grow older; excellent for arbors and trellises

**Ornamental Features**

Joseph's Coat Rose features showy lightly-scented pink flowers with white overtones, yellow eyes and coral-pink edges along the branches from late spring to late fall, which emerge from distinctive red flower buds. The flowers are excellent for cutting. It has dark green deciduous foliage which emerges dark red in spring. The oval compound leaves do not develop any appreciable fall colour.

**Landscape Attributes**

Joseph's Coat Rose is a multi-stemmed deciduous woody vine with a twining and trailing habit of growth. Its average texture blends into the landscape, but can be balanced by one or two finer or coarser trees or shrubs for an effective composition.

This woody vine will require occasional maintenance and upkeep, and is best pruned in late winter once the threat of extreme cold has passed. It is a good choice for attracting bees to your yard. It has no significant negative characteristics.

Joseph's Coat Rose is recommended for the following landscape applications;

- Mass Planting
- Hedges/Screening
- General Garden Use

**Planting & Growing**

Joseph's Coat Rose will grow to be about 10 feet tall at maturity, with a spread of 8 feet. As a climbing rose, it can be leggy near the base and may be concealed by underplanting with lower-growing facer plants. It should be planted near a fence, trellis or other landscape structure where it can be trained to grow upwards on it, or allowed to trail off a retaining wall or slope. It grows at a fast rate, and under ideal conditions can be expected to live for approximately 30 years.

This woody vine should only be grown in full sunlight. It does best in average to evenly moist conditions, but will not tolerate standing water. It is not particular as to soil type or pH. It is highly tolerant of urban pollution and will even thrive in inner city environments. This particular variety is an interspecific hybrid.
